          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DB seq

FUNCTION: TRANSCRIPTIONAL FACTOR THAT MAY HAVE PLEIOTROPIC EFFECT:
DURING EMBRYOGENESIS AND IN THE ADULT.
SUBUNIT: EFFICIENT DNA BINDING REQUIRES DIMERIZATION WITH ANOTHER
BHLH PROTEIN. HETERODIMER OF SIMI AND ARNT.
TISSUE SPECIFICITY: DETECTED IN LUNG, SKELETAL MUSCLE AND KIDNEY.
DURING FETAL DEVELOPMENT IT IS FOUND IN THE CNS, DEVELOPING
KIDNEY, MESODERMAL AND ENDODERMAL TISSUES, INCLUDING DEVELOPING
KIDNEY, MESODERMAL AND ENDODERMAL TISSUES, INCLUDING DEVELOPING
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TRANSCRIPTION FACTORS.
SIMILARITY: CONTAINS 2 PAS (PER-ARNT-SIM) DIMERIZATION SIMILARITY: CONTAINS 1 PAS-ASSOCIATED C-TERMINAL (PAC)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SOMITES, MESONEPHRIC DUCT, AND FOREGUT.
